Part 2b. Description of Payment Card Business

Describe how and in what capacity your business stores, processes, and/or transmits cardholder data.	Not Applicable as Tucasi support payments on behalf of their clients using iframe and redirect techniques, therefore, never receive CHD.
Describe how and in what capacity your business is otherwise involved in or has the ability to impact the security of cardholder data.	Tucasi is a service provider, that provides an e-commerce site for clients to make payments. The in-scope e-commerce website provided by Tucasi covered in this assessment (www.scopay.com) is hosted with CWCS, and will only serve an iframe when payments are to be taken. Only Tucasi staff will have access to the in-scope web servers - never Tucasi client's staff - so only Tucasi's staff will be able to impact on the security of CHD.

Part 2c. Locations

List types of facilities (for example, retail outlets, corporate offices, data centers, call centers, etc.) and a summary of locations included in the PCI DSS review.

For example:

- *Connections into and out of the cardholder data environment (CDE).*
- *Critical system components within the CDE, such as POS devices, databases, web servers, etc., and any other necessary payment components, as applicable.*

Tucasi's in-scope e-commerce service does not receive cardholder data, therefore Tucasi does not have a cardholder data environment. The two in-scope webservers provide iframe mechanisms to process payments and therefore is in scope for applicable requirements from SAQ A. Technical staff within Tucasi are responsible for the management and hosting of the solution (Scopay) and the payment pages, which are dependent on which payment gateway is used by the customer. The colocation webservers are hosted with an external hosting provider called CWCS, but are fully managed by Tucasi. The in-scope e-commerce website is located at www.scopay.com.

environment?
